

AD8367_VCA

接GND为AGC模式，接VCC为VCA模式

The diagram illustrates the internal circuitry of the AD8367 VCA module. The central component is the AD8367 IC, which is configured for VCA mode. The circuit includes a 5V supply connected to the IC via a 2.2k resistor (R1). The input signal is connected to the IC through a 105 capacitor (C1) and a 10nF capacitor (C5). The output signal is connected to the IC through a 10nF capacitor (C6) and a 51R resistor (R7). The IC is also connected to a 5V supply via a 100R resistor (R4) and a 10nF capacitor (C8). A gain choose switch (P4) is connected to the IC. A power supply section (P6) includes a 5V supply, a 10uF capacitor, and a 0.1uF capacitor. An LED indicator (D1) is connected to the 5V supply via a 1K resistor (R10).
